

Assembly instructions Hoopers-Tunnel bottomless

The package includes the tunnel film, 8 aluminum rods and 4 threaded rods with 2 nuts each.

Tip: Assembly is easier with two people

1. Unpack the Hoopers tunnel and place it on the ground. Pull apart at both ends so that it is approximately in the right position.

The 4 red circles show where the openings for the crossbars are. On the other hand it is the same. (4 openings on each side of the tunnel)

2. Start on one side and insert the aluminum rods into the opening with the notch first on the left, then on the right. The notches must be on the outside. (The round notch presses on the arch pole at the end of the tunnel and the pole cannot then rotate).

3. Prepare the threaded piece as shown on the left. Turn the nuts to one end.

Insert the longer threaded part into the left aluminum rod, then stretch the tunnel and insert the right aluminum rod onto the short threaded piece. Then turn the nuts back to the middle and turn the left nut to the left and the right nut to the right until the tunnel is taut.

Then close the black tab with the Velcro fastener.

Do this on both sides and the tunnel is finished.
